(2014-2018) BBA in Hospitality Management

About

  While I was working in the hospitality industry, I was suggested by a friend to switch to programming. After careful consideration and research, I have decided to change my career path.
  Since then I have gone through as much material as I can on my own, I also taken programming course at FUNIX for better understanding and a more solid structure.
  Programming was intellectually stimulating and exciting for me. I am a logical thinker with endless patience, I love solving problem and always strive to learn more. With programming, it felt like I have discovered my passion in life.
